Professional Summary

Final-year B.Tech student in AI & Data Science (CGPA: 8.68) with hands-on experience in building ML models, serverless cloud applications, and full-stack web solutions. Proficient in Python, AWS, TensorFlow, and Generative AI. Delivered a serverless AI diagramming tool with sub-2s response time and a calorie prediction model achieving 90% accuracy. Actively seeking opportunities to apply AI and cloud expertise to solve real-world problems.

Technical Skills

Programming Languages: Python, C, SQL

Frameworks & Libraries: Django, Flask, Scikit-learn, TensorFlow, React.js

AI / ML: Machine Learning, NLP, Prompt Engineering, Generative AI, Deep Learning

Cloud (AWS): Lambda, API Gateway, DynamoDB, Amplify, S3

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook

Other: HTML, CSS, Bootstrap, Tailwind CSS

Education

B.Tech in AI and Data Science

Expected: May 2026

Koneru Lakshmaiah Educational Foundation (KL University), Vijayawada, Andhra Pradesh

CGPA: **8.68 / 10.0**

Experience

Data Science Intern — El Systems (*Remote*)

May 2024 – July 2024

- Developed a **calorie burn prediction model** using supervised ML algorithms (XGBoost, Random Forest), achieving **90% accuracy** on a 15,000-sample fitness dataset.
- Performed end-to-end data preprocessing: handled missing values, feature scaling, reducing model error by **12%**.
- Optimised ML model inference pipeline by applying hyperparameter tuning reducing prediction latency by **~25%**.
- Presented findings and model performance reports to senior engineers and stakeholders.

Projects

AI-Powered Serverless Diagramming Tool

 [View on GitHub](#)

Role: Full-Stack & AWS Cloud Developer | Tech: React.js, AWS Lambda, API Gateway, DynamoDB, DeepSeek LLM

- Built a **serverless web application** that auto-generates ER diagrams, UML diagrams, and flowcharts from plain English prompts using the **DeepSeek LLM**.
- Designed and deployed a **RESTful backend** with AWS Lambda & API Gateway, achieving a consistent **sub-2 second response time** under concurrent load.
- Integrated **DynamoDB** for persistent diagram storage with TTL-based auto-cleanup.
- Deployed a responsive **React.js** frontend via **AWS Amplify** CI/CD pipeline for zero-downtime deployments.

House Price Prediction

 [View on GitHub](#)

Role: Data Scientist | Tech: Python, Scikit-learn, Pandas, Matplotlib, Seaborn

- Built and compared **Linear Regression** and **Random Forest** models to predict house prices; Random Forest achieved **$R^2 = 0.89$** on the test set.
- Applied feature engineering and removed multicollinearity, improving RMSE by **18%**.
- Visualised feature importance and correlation heatmaps to derive actionable insights for stakeholders.

Online Leave Management System

 [View on GitHub](#)

Role: Full-Stack Developer | Tech: Python, Django, HTML, CSS, Bootstrap

- Designed and built a **role-based leave management portal** with separate dashboards for employees, managers, and admins.
- Implemented **Django authentication**, leave approval workflows, and email notification triggers.
- Created responsive UI with Bootstrap — supporting desktop and mobile browsers seamlessly.

Certifications

- **IBM Python for Data Science & AI** — IBM / Coursera 2023
- **Google Cloud Practitioner (Associate)** — Google Cloud 2024
- **TensorFlow Developer Certificate** — TensorFlow / Google 2024
